

Field Application Scientist

We are currently seeking a Field Application Scientist to support sales and development of novel high throughput flow cytometry applications, to provide technical information and demonstrations to current and prospective customers, to provide installation and training for new customers, and to provide support for in-house development of IntelliCyt products and services.

Your responsibilities will include:

- Conduct on-site training sessions
- Provide scientific support for sales activities and on-site or webinar based demonstrations of IntelliCyt instrumentation and software for potential customers
- Participate in the organization and conduct of HyperCyt high throughput flow cytometry workshops
- Participate in and attend scientific meetings and trade shows
- Perform feasibility studies for potential customers and prepare reports based on data generated from these studies
- Perform application testing of new product releases and feedback to R&D and marketing teams to improve product use
- To work collaboratively with Sales, Marketing, and R&D teams to increase sales and customer satisfaction

To be successful in this position, you will need to be creative, thorough scientist and a highly motivated self-starter. Qualifications include:

- A degree in biological sciences with a minimum of three years of hands-on experience in flow cytometry
- Laboratory experience in one or more of the following is required: cell based assay development, cellular and molecular biology, cellular immunology, high-content cellular analysis, cell surface and intracellular fluorescence labeling, high throughput screening
- Strong written and verbal communication skills, with an emphasis on ability to organize and communicate complex concepts in a clear manner
- Ability to travel >50% of time with flexible schedule
